

A Time-Tested Solution

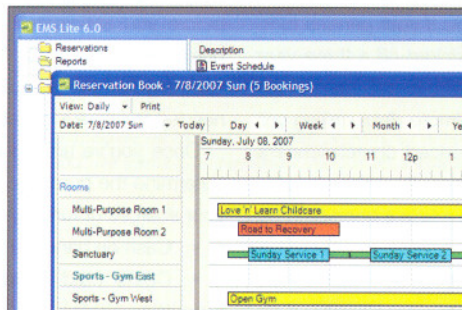

EMS Lite™ from Dean Evans & Associates, Inc. is a cost-effective, user-friendly program for managing the worship services, meetings and events that take place at your church.

Whether you're being guided through a room search process by the intuitive Reservation Wizard or using the graphical Reservation Book to determine the best use of your space, EMS makes the booking of everything from sanctuaries to multipurpose rooms, lobbies to ball fields, simple and straightforward. A comprehensive array of reports lets you communicate event information clearly and concisely to staff members and the congregation.

The optional module for reserving resources (A/V equipment, catering, vehicles and more) makes EMS Lite an even more comprehensive event management solution. Information on scheduled events or room availability can be accessed from the

Internet using the add-on Virtual EMS™ component. Through Virtual EMS, any church member or guest with an Internet browser can get the details on events you've chosen to display on the Web, and authorized users can, at your discretion, go further and submit space requests or even create reservations directly from the Web.

For larger churches or church campuses, EMS Professional™ and EMS Enterprise™ take the core functionality of EMS Lite and add a number of features and functions designed for organizations with high scheduling volumes or multiple facilities.
