

EMS Academic Import Utility

Overview

The EMS Academic Import Utility (AIU) is an optional module for EMS Enterprise™ or EMS Professional™ that works hand-in-hand with most popular academic scheduling systems to import data on when and where classes are slated to take place. Having academic information available in EMS simplifies the booking of extracurricular meetings and events around the class schedule.

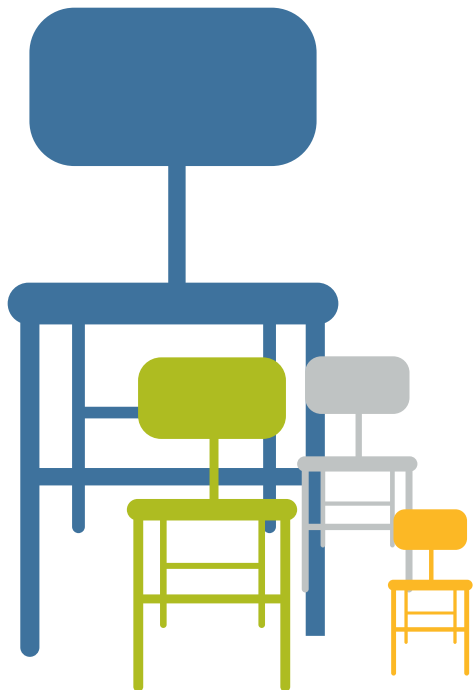

Features and Benefits

Easy to Use

An intuitive interface and documentation with step-by-step instructions ensures that AIU is easy to use, even if you're not a database administrator.

Flexible

The Academic Import Utility works with data exported from any academic scheduling system or database, allowing a school to capitalize on the strengths of both EMS (with its resource tracking, billing and other functionality) and the class scheduling tool. The result of this synergy is enhanced communication and better space utilization.

Event & Class Calendars on the Web

Virtual EMS™

Organizations that utilize both AIU and Virtual EMS can place their entire campus calendar on the web. Information on events scheduled in EMS and classes imported into the system can be found using Virtual EMS, making it simple for anyone to research the location of a class, the curtain time for a play or the date of a student group meeting.
