

## OVERVIEW

The EMS FM Integration Toolkit simplifies the maintenance of facilities information within EMS by keeping it in synch with data in your Facility Management (FM) System. The toolkit takes records that you transfer to a staging database and updates the appropriate tables in EMS.

Rooms and various other room attributes can be automatically updated by this module, which typically is set up to run nightly and can also be initiated manually as needed. Available for EMS Enterprise™, EMS Campus™, EMS Workplace™ and EMS Legal™ and EMS District™ the import is customizable, and our knowledgeable consulting staff can assist you in choosing the fields that will be affected.

The screenshot shows the 'Admin 100' window in the EMS software. It displays a form for editing room information. The 'Room Code' is '000000', 'Room Name' is 'Admin 100', and 'Classification' is 'Standard'. The 'Default Setup Type' is 'Yellow Square'. The 'Setup Hours' are '0:00' to '0:00' with 'Transition Hours' set to '0:00'. The 'Name' field contains the text 'General purpose meeting room that accommodates 20 people comfortably'. Other fields include 'Type' (Conference Room), 'Building' (Administration Building), 'Account' (Room Rentals), 'Phone' (303-659-3741), 'URL' (www.dea.com), 'Size' (400), 'Book Sequence' (7), and 'No. Room Cards' (1). There are also 'Visual EMS Settings' and 'Display On Web' options at the bottom.

## FEATURES AND BENEFITS

- Significant time savings with the elimination of double entry of facility details
- Automatic maintenance of rooms and various other room attributes
- Customization options available
- Streamlined communication between facilities and scheduling departments
