

OVERVIEW

The EMS HR Integration Toolkit simplifies the maintenance of employee and web account information within EMS by keeping it in synch with a data source outside of EMS - often an HR database or Active Directory. On a scheduled basis, the toolkit takes the data you place in the EMS HR staging table and uses it to update the appropriate tables within the EMS database.

Contact name, email address, billing information and more can be automatically updated by this module, which typically is set up to run nightly and can also be initiated manually as needed. The import is customizable, and our knowledgeable consulting staff can assist you in choosing the fields that will be affected.

No more double entry, outdated information or still-active records for former employees!

The screenshot shows a Microsoft Access window titled 'Data in Table 'tblGroup' in 'DemoEnt30' on '(LOCAL)'. The table contains the following data:

| ID | GroupName | Inte | Address1 |
|----|---------------|------|--------------------|
| 41 | Amy Cardell | 0 | 34 Logan Street |
| 42 | Steven Carson | 0 | 345 Main Street |
| 43 | Michelle Dale | 0 | 889 E. Swimming Al |
| 44 | Donna Davis | 0 | 3551 So. Harlan St |
| 45 | Halle Edwards | 0 | 5613 DTC Blvd. |

EMS data tables are automatically updated with additions, changes, etc.

FEATURES AND BENEFITS

- Automated maintenance of contact names, email addresses, billing information and more
- Customizable import that updates only the fields you specify
- Significant time savings with the elimination of dual (EMS and HR system) entry for new employees, contact information updates, etc.
- Enhanced security through rapid inactivation of user records
