

The world is getting smaller every day. As a result, communication challenges loom large. Ensure that your staff and visitors overseas can access meeting and event information in their native tongue with the EMS Language Translation Module.

The Language Translation Module enables language localization for Virtual EMS, the web version of the EMS client, and the EMS Kiosk. Select from “language packs” created by our other customers or translate a list of standard labels for us and we’ll compile a language pack for you. In no time, users will be able to interact with EMS comfortably in their own dialect.

## FEATURES AND BENEFITS

- Option available for Virtual EMS, the web version of the EMS client, and the EMS Kiosk
- Supports all languages and alphabets including Kanji characters
- Create language packs easily with provided spreadsheet of field labels and menu items
- Select the appropriate language for every country in which you have offices
- Easy implementation

**Knock down language barriers with the EMS Language Translation Module!**
