

OVERVIEW

The EMS API (application programming interface) gives software and web application developers a powerful and efficient tool they can use to write programs that interact with an EMS database. The basic EMS API is free to customers and available to their vendors and anyone looking to integrate with EMS. The advanced API is licensed and purchased separately.

FEATURES AND BENEFITS

- Works with EMS Professional and EMS Enterprise-level systems
- Standardizes and simplifies database calls through a well-documented, well-maintained interface
- Advanced functionality allows data to be pushed to your EMS database
- Allows applications to interact with the EMS database via a collection of SOAP-based web services
- Capitalize on the investment in your existing systems by allowing them to share data
- Ideal for creating integrations to HVAC systems, video conference software and more

Streamline the system integration process and maximize your productivity with the EMS API!
