

Automatically detect/capture/track actual meeting/event attendance, optimize room utilization and support real estate-related decision making! EMS AttendanceTracker, included in Enterprise-level EMS facility scheduling products, uses people counting sensors (which you purchase from a vendor such as SenSource) to automatically pull in actual attendance data and record it for each booking that takes place in a monitored meeting room, event space or shared workspace.

For organizations that need accurate room utilization numbers in order to make important business decisions, this module is a must.

Room Statistics	
Estimated Attendance	Actual Attendance
961	865
413	358
379	321
1,453	1,084
349	312

FEATURES & BENEFITS

- Highly accurate actual attendance figures captured and recorded with no user interaction required
- Most tightly integrated facility scheduling/people counting solution available
- Ability to accurately monitor rooms with movable walls/combination rooms in EMS
- Use actual attendance data to analyze room utilization, optimize facility use and support real estate expansion/contraction decisions
- Automatically identify meeting no-shows

EMS AttendanceTracker can be integrated with products from a number of vendors including SenSource (www.sensourceinc.com), whose devices offer many benefits:

- Affordability. One-time sensor purchase; no monthly service fees
- Zero maintenance, long-lasting thermal sensors (average life expectancy 25 years)
- “Blind” counting method: identifiable images of people are not taken
- Not affected by differing light levels
- High accuracy; over 98% in correct conditions
- Non intrusive; usually ceiling mounted
